Centrepont Modular Service Column Installation Instructions

Reg No. CS/960/Q

1. Contents of Package

- Service Column c/w cover and segregation.
- 6 Outlet Mount Kits c/w screws, mounted.
- 5 Intermediate Cover Strips.
- 2 Fixing Brackets, top & bottom mounted, c/w fasteners.
- 1 Ceiling Grid Fixing Strap, c/w 2 pop rivets.
- 2 Ceiling/Floor Trim. (use as template for ceiling cut).

2. To Prepare Column

If needed, remove segregation* and cut the top of the pole to length. Leave adequate length for intrusion into the ceiling space.

If required, adjust the position and cable inlet direction of pre-mounted outlet box. If extra boxes are required, contact your wholesaler.

If required, adjust, cut and fit* segregation to suit. (Note, if outlet boxes are fitted adjacent, no segregation is required between boxes.)

*Segregation can be removed or installed in either of two (2) ways.

- Slide in/out of position from either end, or
- Clip into the right hand slot as per Fig. then clip outwards to the perpendicular. This method is advised when access from either end is closed off.

3. Mounting Column

Use the area inside the ceiling trim as a template for marking the ceiling hole position.

If the pole has been shortened, or if necessary, re-position the top mounting bracket.

Fit Ceiling and Floor Trim around the column before the next step (ensure finished surfaces are facing in the right direction. Tip - use silicon to fix ceiling trim to ceiling panel).

Insert pole into the ceiling and check for vertical position. Mark floor area for bottom bracket fasteners and fix to floor in both fastener positions.

Use ceiling grid straps to secure pole to the ceiling grid or use booker rod (not provided) to secure against/to concrete flooring above.

4. Maintenance

Little or no maintenance is required. Recommended cleaning agents are Spray & Wipe, Mr Sheen or similar.

NOTE: Centrepont Service Column has been designed for use with TPS cable.
